Help Keep Piedmont Photo Club Email Out of Spam

Piedmont Photo Club sends website notices, contest announcements, and password-reset messages from:

piedmontphotoclub@piedmontphotoclub.com

Adding this address to your contacts or safe-sender settings can help prevent club messages from being placed in your Spam or Junk folder. It cannot guarantee delivery because your email provider may still reject or quarantine a message for security or technical reasons.

For the best protection, add the exact email address above rather than allowing every address from the entire `piedmontphotoclub.com` domain.

Before Changing Your Settings

1. Search your Inbox, Spam, Junk, Promotions, and other filtered folders for `piedmontphotoclub@piedmontphotoclub.com`.
2. If you find a legitimate club message in Spam or Junk, select **Not spam**, **Not junk**, or **Move to Inbox**.
3. Add **Piedmont Photo Club** and `piedmontphotoclub@piedmontphotoclub.com` to your contacts.
4. If messages are still being filtered, follow the instructions for your email service below. These settings are usually easiest to change on a computer in a web browser.

Gmail

1. Open Gmail on a computer.
2. Select the **Show search options** icon at the right side of the search box.
3. In the **From** field, enter `piedmontphotoclub@piedmontphotoclub.com`.
4. Select **Create filter**.
5. Select **Never send it to Spam**.
6. Select **Create filter** again.

If a club message is already in Spam, open the Spam folder, select the message, and choose **Not spam**.

Microsoft Outlook and Outlook.com

The names of the settings vary slightly among Outlook versions.

1. Open Outlook **Settings**.
2. Go to **Mail > Junk email**.
3. Under **Safe senders and domains**, select **Add safe sender** or **Add**.
4. Enter `piedmontphotoclub@piedmontphotoclub.com`.
5. Select **OK** or **Save**.

If your email is managed by an employer or another organization, its mail administrator may apply additional filtering that your personal Safe Senders list cannot override.

Apple Mail on a Mac

1. Add **Piedmont Photo Club** and `piedmontphotoclub@piedmontphotoclub.com` to the Contacts app.
2. In Mail, choose **Mail > Settings > Junk Mail**.
3. Make sure the option to exempt messages from senders in your Contacts is selected.
4. If a club message is already marked as junk, select it and choose **Not Junk** or **Move to Inbox**.

Your email provider may filter a message on its server before Apple Mail receives it. If that happens, sign in to the provider's website and mark the message as not spam there as well.

Yahoo Mail

1. Open the **Spam** folder.
2. Select the legitimate Piedmont Photo Club message.
3. Select **Not spam**.

Yahoo will move the message to your Inbox and use your choice when handling future messages from that sender. You may also add the club address to your Yahoo Contacts.

Other Email Services

Look in your provider's settings for **Safe senders**, **Allowed senders**, **Approved senders**, or **Spam filters**. Add this exact address:

piedmontphotoclub@piedmontphotoclub.com

If your account belongs to an employer, school, or other organization, you may need to ask its email administrator for assistance.

Important Security Reminder

A safe-sender entry reduces mistaken spam filtering; it does not prove that every message displaying the club address is genuine. Be cautious if a message unexpectedly requests a password, payment, financial information, or other sensitive information. Piedmont Photo Club will never ask you to send your website password by email.
